Scenario - Check Employee

Login

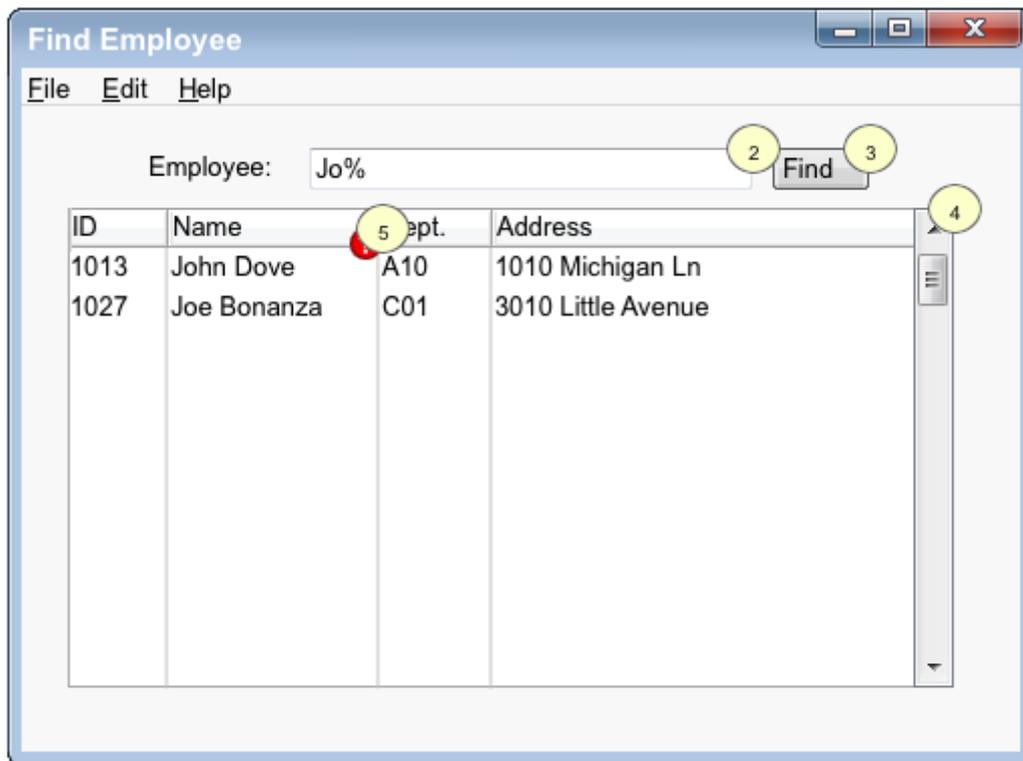

When opening application, user has to identify herself and log in. Application checks user's identity and authorizations and "remembers" it for further use in kind of "security token".

A screenshot of a Windows-style dialog box titled "Login". The dialog box has a light blue header bar with the title "Login" and standard window control buttons (minimize, maximize, close). The main area is white and contains two text input fields. The first field is labeled "Username:" and contains the text "jdove". The second field is labeled "Password:" and contains a series of asterisks "*****". Below the input fields, there is a horizontal line, and at the bottom of the dialog, there are two buttons: "Cancel" and "OK".

Find Employee

Most basic usage scenarios start with user searching employee database and finding the particular employee. Search has to filter employees in realtime as the user types characters of user's name or surname. When user clicks on any particular employee in the grid, app presents detailed data for that employee.

2. Search Criteria
3. Find employees that match criteria
4. Employee data: ID, name, department, address
5. To sort by ID or by name?

Employee Details

Data for any particular employee is divided into "Personal", "Contact" and "Office" data groups. If user has proper authorization, he can edit employee's data on the spot.

Contact	Info	Primary
Work	555-876213	<input type="checkbox"/>
Cellphone	555-671239	<input checked="" type="checkbox"/>
E-mail	jdove@basilsoft.com	<input type="checkbox"/>

2. Different roles have authority to either only read or both read and edit the personal, contact or office data, respectfully.
3. Department is chosen from dropdown list of valid departments. If user has security rights to change persons department, then valid departments to choose from are all departments flag as such for user's role.
4. Address is free text field. In future version it is supposed to be integrated with lookup tables already in place on central system.
